2.5.7 ..	Special magnetic profiles	P. 20			

1 GENERAL INFORMATION

Applications

Because of their high quality material formulation, especially aligned with your installation system, REHAU shower partition seal profiles are suitable for use in a wide variety of shower partition seal systems, for example

- all-glass shower cubicle
- framework shower cubicles
- bath fixtures
- other types of partitions

Photograph supplied by courtesy of Kermi

Material

REHAU, as an innovative processor of polymer materials, constantly faces up to the demands of the market. Our specialists in matters of materials science are working continually on the further development of our material formulations.

Designation of material types:

The designations of material types provide information about the origin of REHAU (RAU), about the raw material (using the plastics abbreviations in general according to DIN 7728) and in the two to four-digit coding scheme about certain material properties.

The coding scheme with RAU-PVC is always four-digit. Numbers between 1100 and 1999 stand for rigid PVC, numbers between 3000 and 9999 for PVC containing plasticiser, whereby the first two figures show the hardness in Shore A.

REHAU rigid/soft PVC (RAU-PVC)

Advantages offered by REHAU profiles in rigid/soft PVC:

- UV resistance

UV resistance is tested in REHAU using XENON TEST 1200, cycle 102/18, alternate cycling.

Laboratory result:

> 1,000 hrs until there is a noticeable change in colour!

- Crystal clear colour matching (rigid PVC)

The high-quality RAU-PVC1107 formulation in combination with an optimum tool design enables REHAU to manufacture the rigid PVC range in a unique crystal clear design (Profiles pages 5-10)

- Acrylic tolerance

Contact by those profiles made of soft PVC with acrylic, PS sheets etc can lead to stress cracking and hardening of soft PVCs.

The use of RAU-PVC 7539 (acrylic resistant formulation) eliminates this chemical reaction.

So, for example, almost all water repellent profiles at REHAU are supplied using PVC 7539.

Testing is done following DIN 53405, which states that migration of plasticiser during the test period of 15 days, at 50°C with 5 kg loading may amount to max. 10 mg.

- Mould has no chance

The fungicide formulation of all our soft PVC materials used in the shower partition seal profiles prevents the growth of moulds.

Laboratory test according to DIN 53739, process B/ISO B46 – 1978, combined with ASTM G 21-70.

- Structured injection moulding of magnetic pockets

The magnetic pockets of all door gasket profiles are injection moulded in a structured material grade (soft PVC).

This counteracts the profiles sticking together and thus any impairment of the door seal

- Structured soft lips

Structured soft PVC lips improve the slide behaviour as regards the glass.

REHAU Silicone (RAU-SIK)

Long-lasting elasticity and recovery capacity are ensured through our own REHAU silicone formulations based on hot-cross-linked silicones. This prevents mould forming.

With glazing beads (profile brochure page 15) a thread is co-extruded in the bead profile to protect against excessive stretching.

Delivery make-up

Depending on the type of product, profiles are supplied in:

- fabrication lengths (length tolerance normally +/- 10 mm)
- spools (magnetic tapes)

Other delivery arrangements are available on request.

REHAU ferrite (RAU-FER)

REHAU ferrite is a flexible polymer compound containing barium ferrite to make it magnetisable. The ferrite content gives the material a black-brown colour.

- Magnetic force:

The magnetic force of the magnetic profiles is measured with a gap of 0.4 mm against an iron counterweight and given in N/cm. With stepped magnets the measurement is made against an iron counterweight with the same stepped formation.

Packaging

Normally profiles are supplied packed in cartons.

Soft PVC lips, which could be squashed during transport /storage, are protected in addition by using polystyrene strips and reinforced cardboard intermediate layers inserted sideways in the boxes.

Special customer-specific packaging can be provided on request.

Customer-specific developments

This profile brochure shows the freely available REHAU programme for the shower partition seal profile. All profiles can be varied to be customer-specific for delivery make-up (delivery length) and colour, among other things.

Naturally you can also develop YOUR profile with REHAU: constructed by us according to your ideas, putting into practice your knowledge and skills for meeting quite specific tasks. Whether simple or complex shapes, whether existing or specially formulated materials, REHAU makes its know-how, knowledge of materials and qualified in-house tool and die shop available to you.

REHAU quality management

Quality is monitored in REHAU from the goods inwards inspection of raw material, through the control of the material values of the extruded profiles, to dispatch on the basis of the REHAU quality assurance system.

The REHAU QM system meets the requirements of the internationally recognised Norm ISO 9001. Regular inspection audits by the certifying company TÜV Süd Management Service GmbH ensure the ISO certificate is retained.

Our service for you in practice is:

- applicational advice
- our own formulation for materials
- exact colour matching in the REHAU colour laboratory
- optimum tool design in our own tool and die shop
- QM system according to ISO 9001
- fabrication into components ready to be installed.

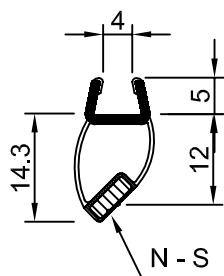

2.1 SEALING PROFILES IN RAU-PVC

CRYSTAL CLEAR COLOUR MATCHING (RIGID-PVC)

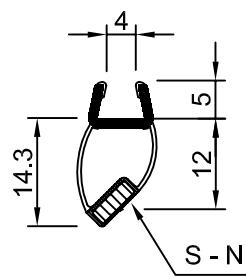

Rigid-PVC in crystal clear colour matching; soft PVC part with transparent textured or transparent clear surface, Shore A 75°, acrylic resistant if necessary;

Door seal profiles with magnetic inlay: Magnet pockets in solid colour or transparent textured material, soft PVC flexible bellows in transparent clear or transparent textured material, magnet 2-pole

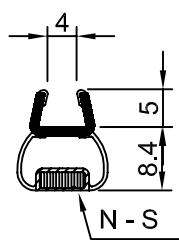

2.1.1 Profiles with 5 mm overlap for 5 mm thick glass
